

## Read Me Ceres4.50.57 Transfer To and From Information not Displaying Correctly (Ceres4.50.57)

Service Request or Support Case:

Issue addressed: Variable "Location" exists as a global variable and local variables for "Transfer-To Code" and "Transfer-From Code" causing the related information to display incorrectly.

Objects Affected:

Type	ID	Name
Table	5740	Transfer Header

This release does not present a change in system usage methodology.

Resolution: The reported issue was corrected by removing "Location" from the local variables of "Transfer-To Code" and "Transfer-From Code". A singular global variable named "Location" remains.
