

Employee Portal

Microsoft Dynamics NAV

EMPLOYEE PORTAL IN MICROSOFT DYNAMICS™ NAV

Give your employees easy access to the critical business information they need.

Key Benefits:

- Easy to set up Web-based interface
- Reduces training time and costs
- Increases employee productivity

Easy to set up and use

Employee Portal in Microsoft Dynamics NAV* makes it easy for your employees to work with critical business information on your company intranet. Employees use SharePoint – the Microsoft intranet standard – to access real-time business information directly from Microsoft Dynamics NAV 4.0.

With Employee Portal, your employees use a Web-based interface to:

- Get quick updates of real-time business information such as invoices, customer data and reports
- Modify information that is then immediately updated directly in your business system
- Access and share business-related Microsoft Office documents

The framework is intuitive and requires minimal programming. Employee Portal comes with out-of-the-box Microsoft .NET based Web parts, and it is easy to configure on the Microsoft Dynamics NAV 4.0 backend.

Reduces training time and costs

If your employees have worked with a Microsoft program or surfed the Internet, they have all the experience they need to begin to use the system.

Like all Microsoft Dynamics NAV solutions, Employee Portal has been developed with the user in mind so that it's both intuitive and simple to use. You save on training costs, and your employees can start working immediately. There are no extra software costs.

Microsoft SharePoint Services is included in Microsoft Windows Server 2003.

Increases Employee Productivity

Employee Portal saves your employees time by giving them instant access to the information they need to do their job.

Now, employees can get the information they need without having to go through licensed Microsoft Dynamics NAV users. Everyone can have access via Microsoft SharePoint on your intranet.

* Microsoft Dynamics NAV, formerly Microsoft® Business Solutions–Navision®

Salespeople can access customer accounts and sales history, and enter orders. Purchasers can look up stock availability, and production designers can look up BOMs.

For more information about Employee Portal in Microsoft Dynamics NAV, visit:

www.microsoft.com/dynamics/nav

Without having to be set up as users, or having to learn a new system, your staff gets access to.

- Analytical reports
- Real-time integrated data
- Sales and service tools

You can create a company-wide intranet where you decide how much access your employees have to the system. This helps ensure that employees remain focused on relevant data, and don't waste time struggling to learn a system that they really don't need to use.

You can even create work-group intranets where information is filtered according to specific interest, for example, a launch portal for a new product.

DATA SUMMARY SHEET

Key Features	Description
Windows SharePoint Services	<ul style="list-style-type: none"> ▪ The Microsoft Standard for intranet information sharing ▪ Helps teams share information, collaborate on documents, and collect team knowledge over the Internet or your corporate network. ▪ Can scale to thousands of sites within an organization ▪ Encrypted communication and detailed security options are available for easy management ▪ Included in Microsoft Windows 2003, and Microsoft SharePoint Portal Server 2003
